Update sent to students, faculty, and staff via e-mail

Hello,

The College has confirmed through lab testing that the flu-like symptoms reported by a student on Thursday, September 24 are NOT the H1N1 (swine flu) virus.

We recommend that all members of the community continue to follow the practices outlined in the attached flyer on how to stay healthy and avoid the flu, and what to do if you think you have flu-like symptoms.

Sincerely,

Michael Luciani
Dean of Students
