Students to Live in George Aiken Hall

Seventy-six Windham College students will share the use of dormitory space. The new building will house approximately 60 students in the summer term, devoted to the study of foreign languages. Most of the latter serving as dormitory staff.

The College has in the present academic year the enrollment of 217 students, up from 131 last year. Approximately two-thirds are men students, with automatic washers and dryers in connection with each of the rooms. The entrance overhang gives the building a somewhat Georgian architectural touch.

Aiken Hall is a two-storied structure, virtually fireproof. It is a combination of poured, reinforced concrete, brick walls and slate roof. The only wood used in the building is in the roof area. All floors and ceilings are poured concrete. The exterior of the building is designed by a wide roof overhang, which increases in width over the front and rear entrances.

Aiken Hall is the completed basement of Robert Frost Hall. This is the site of the dormitory of the new dormitory to be completed next September. Robert Frost Hall is similar to Aiken Hall in all respects except for the common lounge. In front of the library, there will be seven dormitories for students, with four designated for men, and three for women. There will be seven dormitory staff to assist in the student body.
